Comparing Goats: Meat and Dairy

- **Heavier**
  Meat goats need to be heavy to allow the production of more meat.

- **More Diverse**
  Size doesn't matter as much to a dairy goat. This allows increased variety in dairy breeds.

- **Stronger**
  Muscle is key to meat. Meat breeds tend to have more muscle than dairy varieties.

- **More Milk**
  Dairy goats have been bred to produce much more milk than any other goat species.
