

## MSP-59: Remove Foreign Language, Genre, FAST, and Not Specified Subject Headings in Physical MARC Records in the Network and Institution Zones

**Policy:** Foreign language, genre, FAST, and source not specified subject headings in MARC 6XX \_7 \$\$2 will be removed from physical MARC records upon import into the Network and Institution Zones using the SUNY NZ OCLC Import normalization process to improve discoverability in Primo VE. This policy is in alignment with [MSP-12](#): Language of Cataloging.

**Policy Justification:** Foreign language, genre, FAST, and unspecified subject headings in MARC 6XX fields can be omitted from displaying from the “Full Record View” in Primo VE using display normalization rules. However, display normalization rules do not impact foreign language, genre, FAST, and unspecified subject headings in MARC 6XX fields from displaying in Primo VE Subjects facet results. Omitting foreign language, genre, FAST, and unspecified subject headings from MARC records in the Network and Institution Zones will prevent these subject headings from displaying in the “Full Record View” and Subjects facets in Primo VE

Foreign language, genre, FAST, and unspecified [source codes](#) (\$\$2) that are being omitted have been reviewed by SUNY’s Metadata Standards & Policies (SMSP) Working Group. The SMSP determined which \$\$2 source codes should be imported and which \$\$2 sources codes should not be imported into Alma MARC records. The SMSP also determined 6XX with second indicator 4 (source not specified) and 6 (répertoire de vedettes-matière) should be omitted from MARC bibliographic records when they are imported into Alma.

### 6XX \$\$2 Subject Headings Being Retained for Network and Institutions Physical MARC Records:

- 95 subject headings with \$\$2 source of term code being retained
